My main research interests are especially on the following areas:

- Evaluation of tumor biomarkers in liquid biopsy (CTCs and ctDNA)
- Evaluation of epigenetic alterations as promising tumor biomarkers in liquid biopsy
- Development of single-plex and multiplex RT-qPCR assays for the detection and molecular characterization of CTCs,
- Development of single-plex and multiplex RT droplet digital PCR (RT-ddPCR) assays for gene expression in CTCs
- Development of single-plex and multiplex droplet digital PCR (ddPCR) assays for mutation analysis in CTCs and ctDNA
- Development and clinical evaluation of single-plex and multiplex DNA methylation assays based on Methylation Specific PCR (MSP) and droplet digital MSP in CTCs and ctDNA
